

The Identity Cloud

Turn on visibility, control, intelligence and rapid time-to-value on the world's #1 converged identity platform, born in the cloud to power and protect your organization like never before.

One Converged Platform. Complete Identity Control.

See everything. Control everything.

Govern and secure workforce, external and machine identities across your complete technology ecosystem through a single pane of glass that puts you in complete control of risk.

Simple to use. Fast to deploy.

Onboard applications once, easily create reports, manage access policies and configure workflows for your specific identity use cases all through a single, simplified experience.

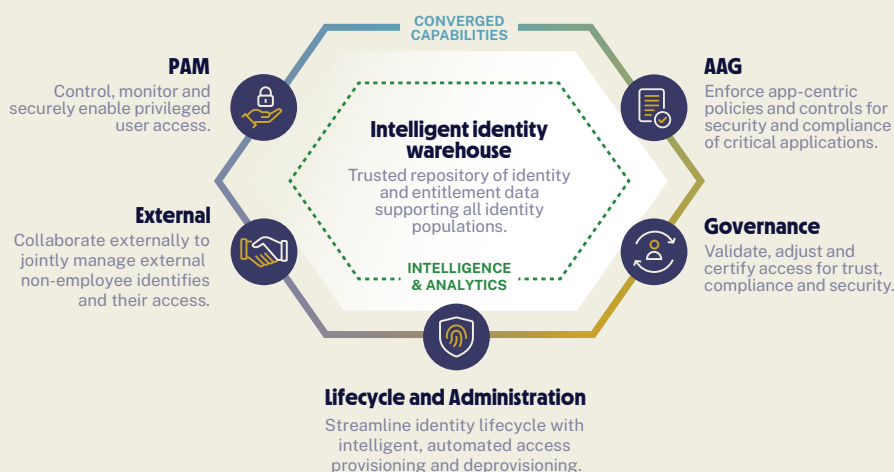

Detect earlier. Respond smarter.

Identify compromised identities and abnormal access patterns, empowering your SOC team to put your organization ahead of risk with identity intelligence that transforms security speed and effectiveness.

Lower cost. Transform ROI.

Eliminate the cost of legacy and point solutions, manual provisioning and access certification with intelligent automation that boosts workforce productivity and delivers value from day one.

Security and technology leaders power and protect their organizations with Saviynt

Origin Energy powers productivity across more than 11,000 employees, contractors and partners, reducing access provisioning from 10 days to 1 hour.

BHP is a global resources company that focuses on the exploration, development, and production of natural resources, including minerals, oil, and gas.

Danfoss protects 45,000 user identities in more than 100 countries while powering employee productivity with 83% faster onboarding.

Wienerberger powers secure digital transformation with centralized visibility and control over 17,000 user identities across 201 production sites and 30 countries.

BP protects its cloud and digital transformation with a single view of identity risk, more secure onboarding processes and complete control over compliance.

Western Digital protects 85,000 global workers and powers the success of continuous M&A activities by securing new applications and identities rapidly, securely, and efficiently.
