XM Cyber

Continuous Exposure Management Platform

Focus on fixing your most critical exposures. With XM Cyber, you can identify all vulnerabilities, misconfigurations, and credential issues to see how they chain into attack paths across your hybrid environment.

Context is everything when it comes to reducing risk, and not all exposures impact your security posture in the same way. XM Cyber helps you move from endless, siloed lists in need of remediation to an attack graph that pinpoints the exact exposures that are most critical to protect your on-prem and cloud environments.

With XM Cyber as part of your Continuous Threat and Exposure Management (CTEM) program, you can mobilize teams to block attackers at Choke Points for accurate and cost-effective remediation that rapidly improves security posture.

75%

of security exposures aren't on attack paths to critical assets, yet teams still waste time fixing them.

Remediate
risk efficiently

Focus on fixing Choke Points that eliminate many attack paths, not irrelevant Dead Ends. Follow contextual, guided remediation options for fast, consistent fixes.

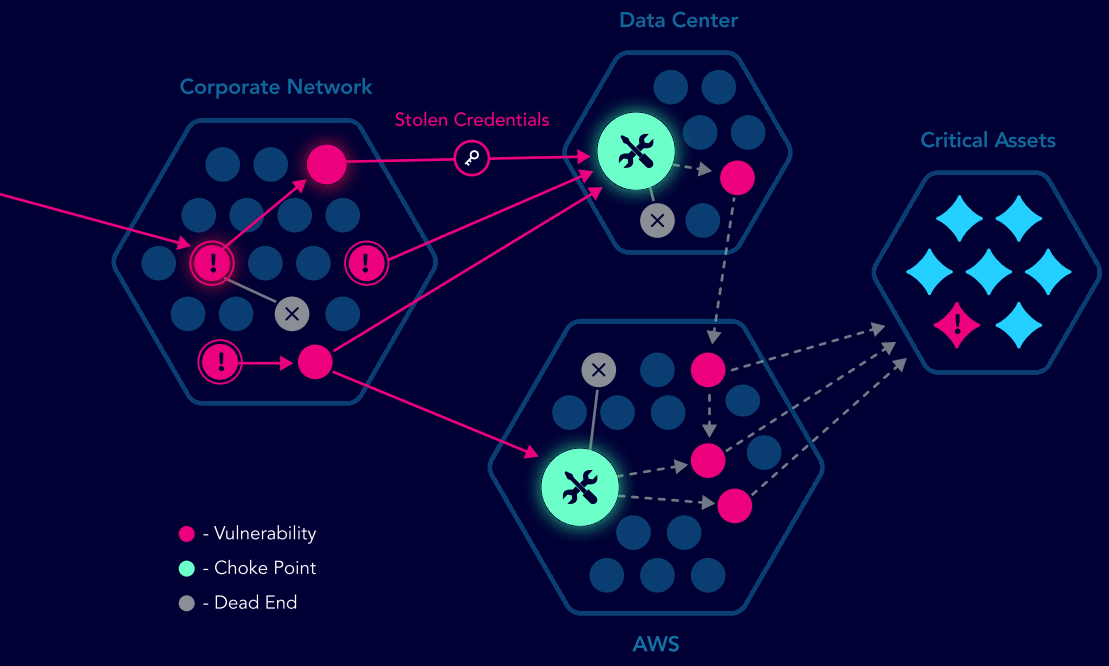
Prevent
more attacks

Using advanced attack graph analysis, identify the highest risk exposures that threaten your critical assets. Fix those first to prevent attacks.

Report
true risk

Address questions such as, "What percent of critical assets are at risk?" and, "How is my security posture improving over time?"

A Smarter Approach – Attack Graph Analysis™



Reveal ALL exposures

Single view across your on-prem and cloud networks, from external to internal

Direct resources on remediating choke points

Harden your environment to continuously reduce exposures

XM Cyber Continuous Exposure Management Platform

Choke Point & Dead End Identification

Map out all attack paths and identify exposures that don't help attackers move towards critical assets - the Dead Ends that can be ignored. Also identify exposures that when remediated block many attack paths - the Choke Points that enable optimized risk reduction.

Context-based Remediation Guidance

With XM Cyber, you get context-based guidance on all the different remediation options available, to accelerate the remediation process and improve process consistency.

Security Posture Scoring & Trends

Demonstrating improvement in your security posture over time is essential. XM Cyber helps you share continuously updated metrics of security posture and trending that shows the impact of remediation efforts.

Management of CVEs, Misconfigs, & Identity Issues

XM Cyber helps you discover, prioritize, remediate, and validate all exposure types with a single view, providing a holistic contextual view into risk.

Active Directory & Identity Security

Attackers leverage identities in attacks, and the complexity and pervasive nature of Active Directory makes it a prime target. XM Cyber zeros-in on identity issues and cached credentials.

Hybrid Cloud Posture Management

With a holistic, attacker-oriented perspective, XM Cyber grants insights you need, regardless of the environment - cloud, on-prem or hybrid.

> ***Every company in the world has too many vulnerabilities to manage, and you get this alert fatigue, so you don't even know where to start. In some areas, we have 200,000 patches in the queue. But with XM Cyber, we see the most vulnerable points."***

Head of IT Infrastructure, Retail industry

XM Cyber

XM Cyber is a leading Continuous Exposure Management company that transforms the way organizations approach cyber risk, enabling security teams to prevent more attacks with 75% less remediation effort. Its XM Attack Graph Analysis™ capability discovers CVEs, misconfigurations, and identity issues across on-premise and all major cloud environments. It analyzes how attackers can chain exposures together to reach critical assets, identifies key "choke points", and provides remediation guidance. Founded by top executives from the Israeli cyber intelligence community, XM Cyber has offices in North America, Europe, Asia, and Israel.
